AVIT SUPPORT & CONNECTIVITY FOR SUPERYACHTS

Independent technical support, audits and refit planning.

Delivered onboard and remotely.

- AV & IT Support
- Refit Planning & Technical Oversight
- Connectivity & Data Services

TheYachtAVIT

WHY INDEPENDENT AVIT SUPPORT?

Modern superyachts depend on AV, IT, and connectivity systems that must operate reliably every day — often without a dedicated onboard AVIT or ETO.

While integrators deliver systems, long-term operation, troubleshooting, documentation, and evolution frequently fall outside the vessel's direct control, increasing operational risk.

A single AVIT port of call.

Support for captains, chief engineers, owners' representatives, and management teams requiring continuity, clarity, and technical oversight across onboard AV and IT systems.

Not every yacht comes equipped with an AVIT or ETO. TheYachtAVIT serves as your remote ETO.

SUPPORT SERVICES

AV & IT systems rarely fail suddenly. They degrade quietly over time, turning small issues into operational risk.

Without structured oversight, reactive support becomes the norm instead of the exception.

Remote Support & Ongoing Oversight

- First-line AV & IT incident response
- Continuous system and connectivity monitoring
- Crew assistance and supplier escalation
- Patching, updates and cyber security reviews

Onboard Support

- Optional onboard attendance
- Yard periods, refits, and commissioning support

Support structured around the vessel's operational needs.

AUDITS & TECHNICAL REVIEWS

Audits provide an independent, structured review of a vessel's AV, IT and connectivity systems, identifying risks, inefficiencies and opportunities for improvement.

The focus is on understanding how systems are configured, how they interact, and how they perform in real-world operation.

Audit Scope

- AV & IT system review
- Network architecture and segmentation
- Server, storage and backup platforms
- Connectivity and redundancy design

Deliverables

- Clear written findings
- Prioritised recommendations
- Identification of operational risks
- Practical next steps and options

Designed to support informed decisions, not unnecessary change.

REFIT PLANNING & TECHNICAL OVERSIGHT

Refit periods introduce risk when AV, IT and connectivity systems are upgraded in isolation.

Independent technical oversight ensures systems are designed coherently, documented properly, and aligned with the vessel's operational reality — not driven by installers preference.

Scope of Involvement

- Pre-refit technical surveys
- Network and infrastructure design
- AV / IT technical specifications
- Review of supplier proposals and scope
- Technical coordination during yard period

Vendor-neutral, pragmatic, and designed for the future.

CONNECTIVITY & DATA SERVICES

Reliable connectivity underpins every modern AV &IT system onboard, from guest experience to vessel operations. Services are designed to deliver predictable performance, visibility of usage, and flexibility as vessels move between regions.

Satellite & Cellular Connectivity

- Starlink maritime solutions
- Multi-antenna redundancy strategies
- 4G / 5G coastal connectivity
- Hybrid satellite / cellular design

Data Management & Oversight

- Data plan selection and optimisation
- Usage visibility and reporting
- Fair-use management
- Support integration with onboard networks

Connectivity structured around operational needs, not arbitrary data tiers.

ENGAGEMENT WITH THEYACHTAVIT

Engagements typically begin with an audit or defined scope of support, followed by structured recommendations and ongoing involvement as required.

Remote Support

- Monthly support agreements
- Ad-hoc technical assistance

Onboard & Project Support

- Scheduled attendance
- Refit and yard period involvement

Leveraging over nine years of hands-on experience in the superyacht industry, independent technical oversight is provided across AV, IT, and connectivity systems.

Engagements are structured to ensure systems are understood, documented, and supported throughout their operational life.

For an initial audit, support discussion, or informal consultation, please get in touch.
